### [Atomic layer deposition - Wikipedia](#)

Atomic layer deposition (ALD) is a thin film deposition technique that is based on the sequential use of a gas phase chemical process. ALD is considered a subclass of chemical vapour deposition. The majority of ALD reactions use two chemicals, typically called precursors.

Imagine being able to deposit a film of material just a few atomic layers at a time. As impossible as that sounds, atomic layer deposition (ALD) is a reality. In fact, it's being used in an ever-increasing number of applications as an extremely precise and controllable process for creating thin films.
